

HIGH SPEED PALLET DISPENSERS

**MODEL APD-X
With Conveyors**

Model EPD

An automatic pallet dispenser from PRS will eliminate the heavy lifting in many applications. These machines provide dependable dispensing of individual pallets from stacks. Full stacks of pallets are automatically conveyed into the stack chamber and individual pallets are dispensed automatically upon demand. These fully automatic machines send signal to stack infeed conveyor which powers on until a stack has been loaded in to the stack chamber. Model EPD is powered fully by electric rather than hydraulic which results in fast, smooth pallet dispensing. Custom EPD models can also work as a buffer, stacking pallets and dispensing them as needed. Model APD can be changed over to accommodate various pallet sizes.
